

Anthony Mekwunye

Software Engineer • Open to global teams

Email: anthonymekwunye95@gmail.com | LinkedIn: <https://www.linkedin.com/in/anthony-mekwunye-68a265237/> | GitHub: <https://github.com/>

SUMMARY

Software engineer focused on designing clean systems, shipping dependable applications, and turning complex business requirements into smooth user experiences.

SKILLS

Frontend

React, Next.js, TypeScript, Accessibility, Performance optimization

Backend

Node.js, Express, REST APIs, Authentication, PostgreSQL, Redis

Mobile

Capacitor, Push notifications (FCM), Kotlin Multiplatform (KMP), Flutter fundamentals

Cloud & DevOps

Docker, CI/CD, Monitoring, Logging, Deployment pipelines

Engineering Practice

System design, Testing, Debugging, Code reviews, Technical documentation, Agile delivery

EXPERIENCE

Senior Software Engineer — 2024 — Present

- Leading feature delivery, architecture decisions, and technical collaboration on product initiatives serving growing user needs at CidiPay.

Technical Support Engineer — 2022 — 2026

- Provide front-line technical support for Microsoft Dynamics 365 CRM, handling configuration, integration, data migration, and performance troubleshooting.
- Investigate customer-reported issues to identify root causes and recommend fixes aligned to product and platform best practices.

Technical Support Specialist — 2021 — 2022

- Delivered end-user support for hardware and software issues via phone, email, and in-person assistance to minimize downtime.

PROJECTS

CidiPay Mobile (Android/iOS) — 2026

Built and shipped a mobile wallet app with deposits, transfers, P2P trading chat, escrow flows, and in-app KYC verification—focused on polished UX, real-time updates, and reliable transaction handling.

Link: <https://www.cidipay.com>

Stack: React, Capacitor, Tailwind CSS, Node.js, Express, PostgreSQL, Socket.IO, Firebase (FCM)

Analytics Dashboard for Operations Teams — 2026

Built a responsive dashboard with role-based access, real-time metrics, and data-heavy UI flows that improved decision-making speed for internal stakeholders.

Stack: React, TypeScript, Node.js, PostgreSQL

High-Throughput Order Processing Service — 2025

Designed and shipped backend services for transaction workflows, improving reliability and reducing manual operational handling through better automation and validation.

Stack: Node.js, Express, Redis, Docker

Internal CI Visibility Tool — 2024

Created an internal tool to visualize pipeline health, flag failures earlier, and reduce the time engineers spent debugging avoidable deployment issues.

Stack: Next.js, CI/CD, Observability
